Summary

Backend and Systems Engineering focused developer with experience building distributed backend systems, compiler architectures, secure REST APIs, Dockerized deployments, and scalable Spring Boot applications. Strong interest in distributed systems, backend infrastructure, debugging, and performance-oriented engineering.

Technical Skills

Languages: Java, JavaScript, Python, C++, SQL

Backend: Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication, MVC Architecture

Frontend: React.js, Tailwind CSS, Bootstrap

Databases: PostgreSQL, MongoDB, MySQL, Redis

DevOps & Infrastructure: Docker, Docker Compose, Basic Linux

Core CS: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Compiler Design

Projects

- High Performance Distributed Rate Limiter | Java, Spring Boot, Redis Jan 2026 – Feb 2026
 - Built a distributed rate limiting system using Spring Boot and Redis to protect backend APIs from abuse, brute-force attacks, and excessive request loads.
 - Implemented custom Spring interceptors and centralized Redis-based request tracking for scalable concurrent request handling across multiple backend instances.
 - Designed low-latency request validation flows optimized for distributed backend environments and high-throughput systems.
- SimpleLang Compiler | C++, Compiler Design, AST, Parsing Nov 2025 – Jan 2026
 - Developed a custom compiler from scratch featuring lexical analysis, recursive descent parsing, AST generation, and assembly code generation for an 8-bit CPU architecture.
 - Implemented custom parsing logic for syntax validation, tokenization, and operator precedence handling without external parser generators.
 - Engineered low-level memory handling strategies to overcome single-accumulator CPU execution constraints.
- Cafe Management Platform | React, Spring Boot, PostgreSQL, Docker Mar 2026 – Present
 - Architected a production-ready full-stack cafe platform with JWT authentication, REST APIs, Dockerized deployment, and Nginx reverse proxy integration.
 - Implemented secure role-based access control using Spring Security a364(in)2e13 r backC Arkinstances.
 -
